Change is the Only Constant: Handwriting on the Wall

Change Happens
They Keep Moving the Cheese

Anticipate Change
Get Ready For The Cheese To Move

Monitor Change
***Smell The Cheese Often So You
Know When It Is Getting Old***
Adapt To Change Quickly
***The Quicker You Let Go Of Old Cheese,
The Sooner You Can Enjoy New Cheese***

Change
Move With The Cheese

Enjoy Change!
***Savor The Adventure And
Enjoy The Taste Of New Cheese!***

**Be Ready To Quickly Change
& Enjoy It, Again, And Again!**
They Keep Moving The Cheese

ORACLE

NEWS: DB Time is Not News

DB Time is Pervasive, Familiar, Evolutionary

- DB Time is the fundamental measure of Oracle performance
 - Arrived at progressively but designed-in from 10g
- You are likely using DB Time methods already
 - AWR and ASH reports
 - Enterprise Manager
- DB Time is performance analysis science matured
 - Wait event analysis, YAPP and tracing are all its ancestors

DB Time on the Database Home Page

- Host CPU
 - Is host CPU-bound? Is this DB responsible?
- Active Sessions
 - DB Time accumulation by CPU, User I/O, Wait

DB Time on the Performance Page

- Area under curve is equal to DB time
- Wait class breakdown indicates solution space

Average Active Sessions

Top Activity

DB Time on the Top Activity Page

- Plots DB Time from ASH data
- Shows top DB Time consumers by SQL and Session

DB Time in AWR Report

Time Model Statistics

- Time Model measures and accumulates DB Time through session instrumentation
- DB Time and DB CPU most important
- Also shows DB Time expended in various sub-operations

- Total time in database user-calls (DB Time): 2346.6s
- Ordered by % or DB time desc, Statistic name

Statistic Name	Time (s)	% of DB Time
sql execute elapsed time	2,282.41	97.26
DB CPU	601.12	25.62
parse time elapsed	107.84	4.60
hard parse elapsed time	94.50	4.03
PL/SQL compilation elapsed time	1.43	0.06
connection management call elapsed time	0.70	0.03
PL/SQL execution elapsed time	0.31	0.01
repeated bind elapsed time	0.22	0.01
hard parse (sharing criteria) elapsed time	0.12	0.01
failed parse elapsed time	0.04	0.00
sequence load elapsed time	0.02	0.00
hard parse (bind mismatch) elapsed time	0.01	0.00
DB time	2,346.61	
background elapsed time	14.43	
background cpu time	8.83	

DB Time in AWR Report

Top 5 Timed Foreground Events

- If you tune by Wait Events you are tuning by DB Time
- Top 5 Timed Events in the AWR report shows CPU time and non-idle waits for foregrounds

Event	Waits	Time(s)	Avg wait (ms)	% DB time	Wait Class
DB CPU		1,270		55.01	
direct path read	22,220	661	30	28.62	User I/O
direct path write temp	11,753	199	17	8.63	User I/O
direct path read temp	40,182	156	4	6.76	User I/O
log file sync	187	9	48	0.39	Commit

DB Time in the Grid Control DB Loadmap

- Maps DB Time across the enterprise
- Cell size proportional to DB Time

View ☒ Oracle Load Map ☐ Search List

Page Refreshed

Total Active Load: 578.2 active sessions

View Level: ☒ Database ☐ Instance

DB Time Fundamentals

Why Do We Care About Time?

- Human time is critical to the enterprise
- Systems performance affects business goals
 - Human time + technology resource time
- “Time is money”
- Performance improvement means doing things faster

Performance is always and only about time

DB Time Defined

- Total time in database calls by foreground sessions
- Includes CPU time, IO time and non-idle wait time
- DB Time is not called response time on purpose
- Common currency for Oracle performance analysis

Database time is total time spent by user processes either actively working or actively waiting in a database call.

Session-level Concepts

Database Time (DB Time) =

Total time session spends in all database calls

Active Session =

Session currently spending time in a database call

Average Activity of the Session (% Activity)

= Ratio of time active to total wall clock time

= $\text{Sum}(\text{Active Time}) / \text{Elapsed Time}$

Multiple Sessions

DB Time = Sum of DB Time over all sessions

Avg. Active Sessions = Sum of Avg. Activity over all sessions
= $\text{Sum(DB Time)} / \text{Elapsed Time}$

Visualizing DB Time

Enterprise Manager Performance Page

- Active Sessions by wait class over time
- Colored area is the amount of DB Time

DB Time and System Performance

System Load and DB Time

- More users

More database calls

DB Time increases

- Larger transactions

More SQLs per call

DB Time increases

DB time increases as system load increases.

System Performance and DB Time

- I/O performance degrades

I/O wait time increases

DB Time increases

- Application performance degrades

Longer elapsed time per SQL

DB Time increases

DB time increases as performance degrades.

Host Performance and DB Time

- Host is CPU bound

Foregrounds accumulate active run-queue time

Wait event times are artificially inflated

DB Time increases

Tune for CPU before waits when CPU constrained

CPU Run-Queue and DB Time

DB time is inflated when host is CPU-bound

The DB Time Method for Performance Tuning

The DB Time Method: Short Course

or
just ask ADDM

The DB Time Method: Process

1. Identify performance issue
2. Scope the issue
3. Set goals
- ~~4. Data capture~~ → **AWR handles this**
5. Investigate DB time distribution
 - Identify largest potential improvement
6. Modify system to tune for largest gain
7. Evaluate against goals

Performance tuning by removing excess DB time

1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 26

- Big spike = big problem!
- Container (host) or database issue?

Investigate DB Time Distribution

- Identify excess DB time
 - Look for large skews in time that may represent inefficiencies
- System scope:
 - Resource limits – is problem outside the DB?
 - Resource contention (latches)
- Application scope:
 - Service, module, action
 - SQLID, rowsource
 - Resource contention (enqueuees)
- Session scope:
 - Long-running SQL
 - Resource contention (holding enqueuees in uncommitted txns)

Investigate DB Time distribution

- Which wait classes are dominant?
- “Top” lists show skew in key dimensions (SQL, session, file, etc.)

Identify Time-saving Modifications

- System scope:
 - Initialization parameter changes
 - Add resources or capacity
- Application scope:
 - SQL Tuning Advisor: SQL profiles
 - Real-time SQL Monitoring
 - Access Advisor: Physical schema layout
 - Re-write SQL
- Session scope:
 - Kill session for immediate contention relief
 - Application design changes often long-term solution

Critical Success Factors

- Match solution scope to problem scope
 - Don't tweak optimizer parameters before tuning SQL
- Address root causes, not symptoms
- Proceed iteratively one fix at a time
 - Concurrent fixes should be orthogonal
- Measure and validate results at each successive step
- Stop when goals are met

Advantages of the DB Time Method

- Tunes exactly what affects users:
 - Time wasted in database
- Data capture not necessary:
 - ‘Always on’ instrumentation framework (AWR, ASH)
 - No requirement to reproduce problem (unlike tracing)
- Superior coverage of all scope levels
 - Works for concurrency problems such as locking
 - Tight integration with kernel-engineered tools
- Maturation and extension of well-proven methodologies

DB Time Based Tools:

ADDM

Enterprise Manager

Tools for Applying DB Time Method

Two use-cases, one method:

1. Tuning steady-state performance

- Improve overall workload throughput or response time
- Best practice: use ADDM

2. Diagnosing transient performance problems

- Confirm and investigate reported performance issues
- Best practice: use EM real-time screens

Example: Using ADDM

- Users complain about bad performance
 - AWR report indicates some unusual issues on system
 - What to do?

Top 5 Timed Foreground Events

~~~~~

| Event                | Waits  | Time (s) | Avg<br>wait<br>(ms) | % DB<br>time | Wait Class |
|----------------------|--------|----------|---------------------|--------------|------------|
| eng: HW - contention | 72,518 | 5,310    | 73                  | 41.0         | Configurat |
| buffer busy waits    | 81,124 | 4,693    | 58                  | 36.3         | Concurrenc |
| eng: TX - contention | 133    | 1,699    | 12776               | 13.1         | Other      |
| Data file init write | 6,839  | 300      | 44                  | 2.3          | User I/O   |
| free buffer waits    | 14,733 | 144      | 10                  | 1.1          | Configurat |

Jan 17, 2006 ... AWR/ADDM shows the reason for the slow down to be HWM **contention**

## Example: Following the links

- Many hits are other people asking the same question – what do I do about this wait event?

# Solution: ADDM in Enterprise Manager

- Performance Page shows a spike of unusual activity
  - Click on the ADDM analysis icon

# Solution: Using ADDM

- ADDM performance findings are DB Time based
  - Ranked by impact = percent of DB Time affected
  - Click on the issue with the highest impact

**Consider using ORACLE's recommended solution of automatic segment space management in a locally managed tablespace for the tablespace "WORK" containing the TABLE "SYS.TEMP" with object ID 62750. Alternatively, you can move this object to a different tablespace that is locally managed with automatic segment space management.**

Database Object SYS.TEMP

| Findings                                                                                 | Percentage of Finding's Impact (%) | Additional Information |
|------------------------------------------------------------------------------------------|------------------------------------|------------------------|
| ▼ Contention on the high watermark (HW) enqueue was consuming significant database time. | <div><div></div> 13</div>          |                        |
| Wait class "Configuration" was consuming significant database time.                      | <div><div></div> 23.3</div>        |                        |

## Best Practice: Enterprise Manager Real-time Interface

- Transient (sub-hour) or immediate time scope
  - Requires interactivity of UI
- ‘Click on the big stuff’ 
  - Data visualizations display skew directly
- Takes some expertise to separate symptoms from root causes

# Click on the Big Stuff – Follow the DB Time

- Spike in DB Time signals possible performance issue
- Click through to Top Activity for more details

# Follow the DB Time – Top Activity Drilldown

- Top Activity Page confirms problem and shows highly skewed DB Time by SQL ID. Click on top SQL ID for further details.

## DB Time Method Summary

- DB time is the fundamental performance metric
- The method allows DB time analysis at many scopes
  - Proper scoping of problems and solutions is critical to success
- DB time based diagnosis removes value judgments
  - Scientific method, not sorcerer's magic

***Performance improvement means doing the same  
work in less DB Time***
